

Using “Cute PDF” to Convert Files to the PDF Format

Using Cute PDF is very easy. It works like any other printer. The only difference is that it will ask for a filename to print your document to. In the following example it is assumed that you will be creating PDF from a MS Word document.

1. Start MS Word and open or create a document
2. Click →**File** → **Print**.
3. Select Cute PDF Writer as the output printer.
4. Click OK to start the print job
5. The following dialog will appear:

6. Browse to the desired location of your PDF and give the file a name. Click ‘Save’ to save your PDF.
7. This procedure will work with any application (Publisher, Excel, etc.)

If you want to link your new PDF file to your web page, please follow the following procedure [“Linking a PDF in Your Web Page”](#)..
